Intelligent Smart City Monitoring & Management Platform

**Drones, AI analytics, digital twin,
and urban process automation**

We offer a unified city management solution combining autonomous drones, AI data analysis, 2D/3D digital modeling, and monitoring systems.

The platform enhances safety, accelerates incident response, and digitizes urban processes.

**UNIFIED SOLUTION
FOR A SMART CITY**

Core Challenges in Urban Management

Modern cities possess complex infrastructure requiring constant monitoring.
Traditional control methods lack sufficient speed and accuracy.

**DRONE
SERVICE**

**UNB
GROUP**

Vast territories and high object density

Low manual efficiency and personnel risks

Camera blind spots and slow incident response

Disparate data and lack of unified analytics

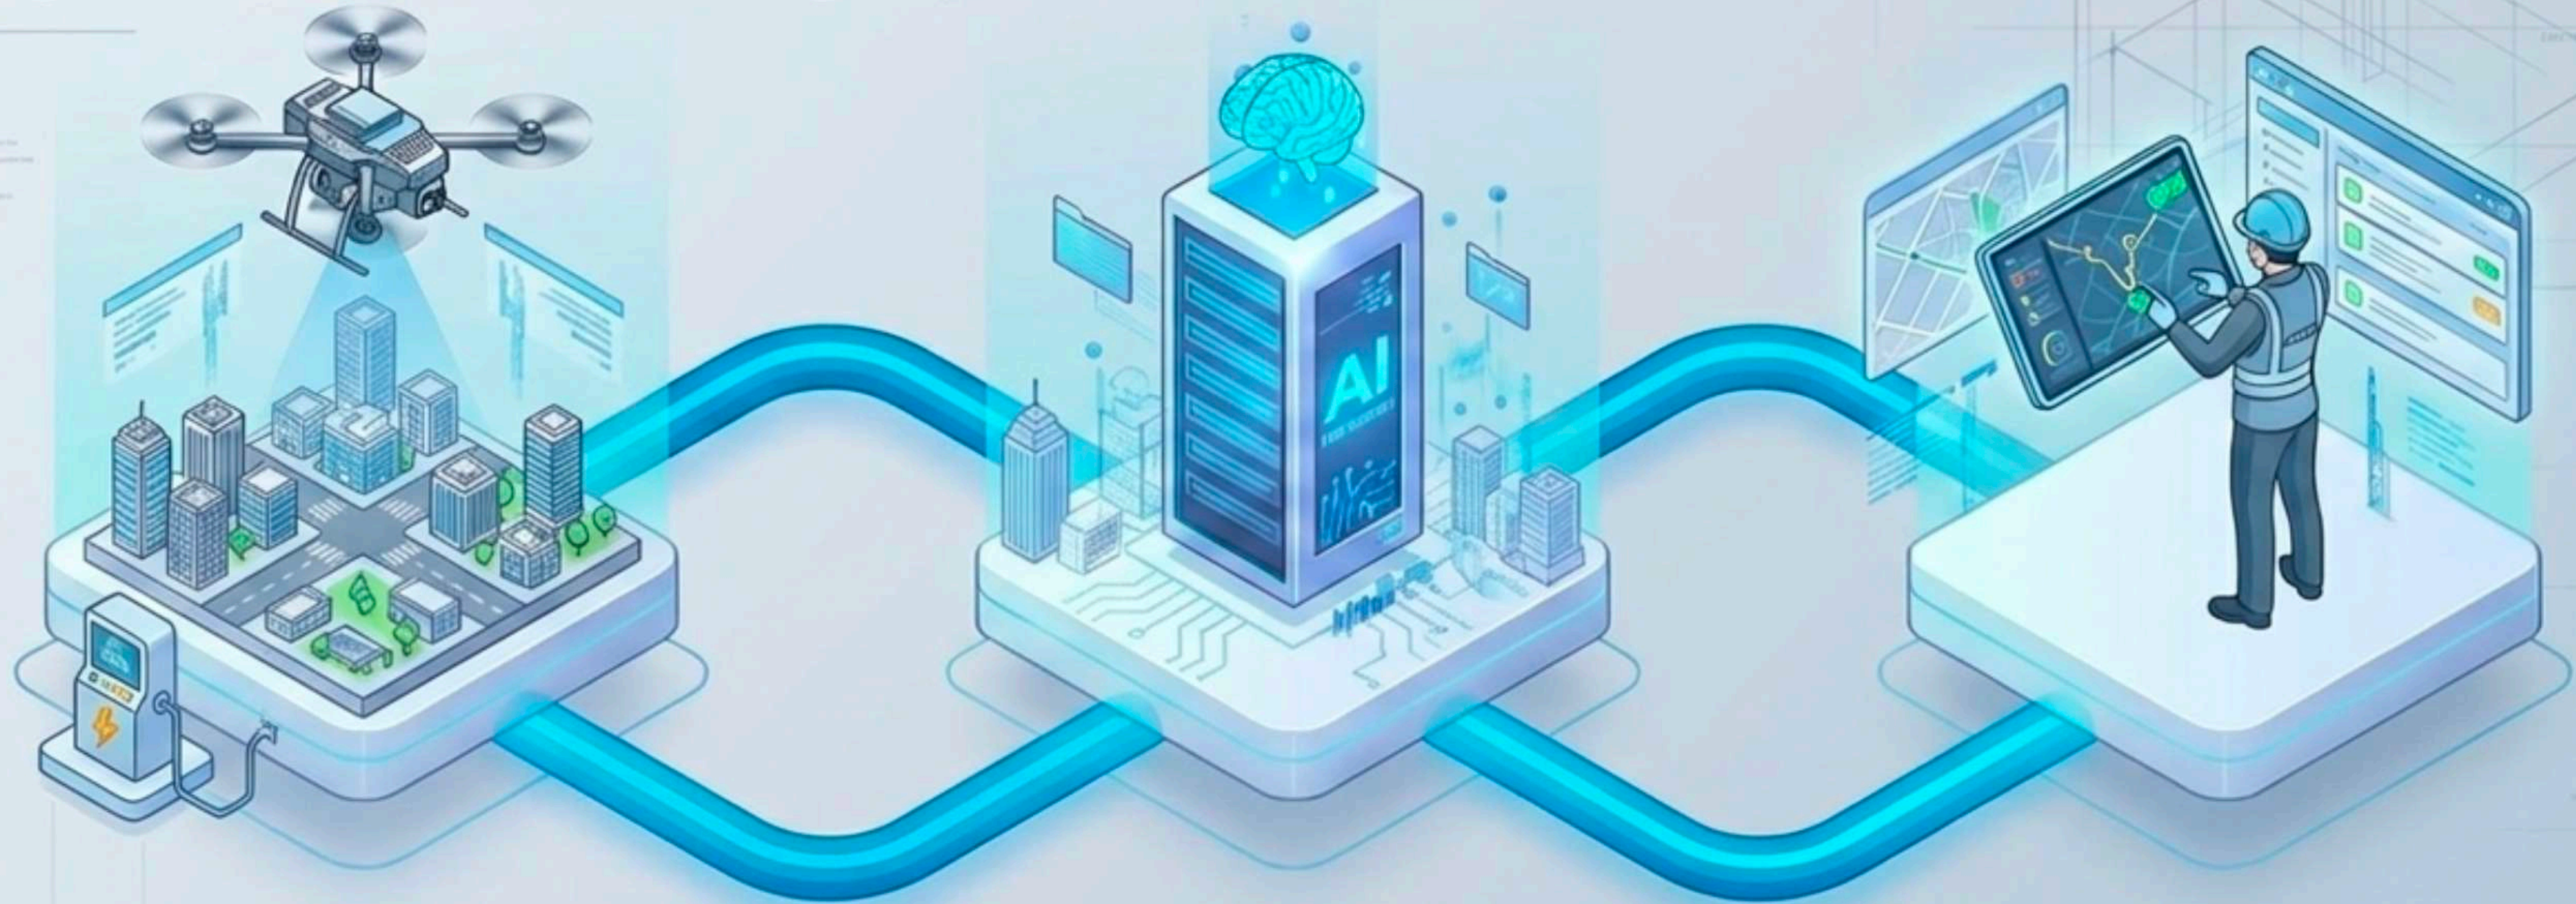

Unified Smart City Digital Platform

**DRONE
SERVICE**

**UNB
GROUP**

The solution integrates all city monitoring, analysis, and management processes into a single system.

Autonomous drones and stations
(photo, video, LiDAR collection)

AI recognition and digital twin
(data analysis)

Management platform
(task and control system)

Everything within a single digital perimeter

**DRONE
SERVICE**

**UNB
GROUP**

From Monitoring to Management

The system automatically detects incidents and triggers response protocols.

Digital Foundation: The Core of Smart City

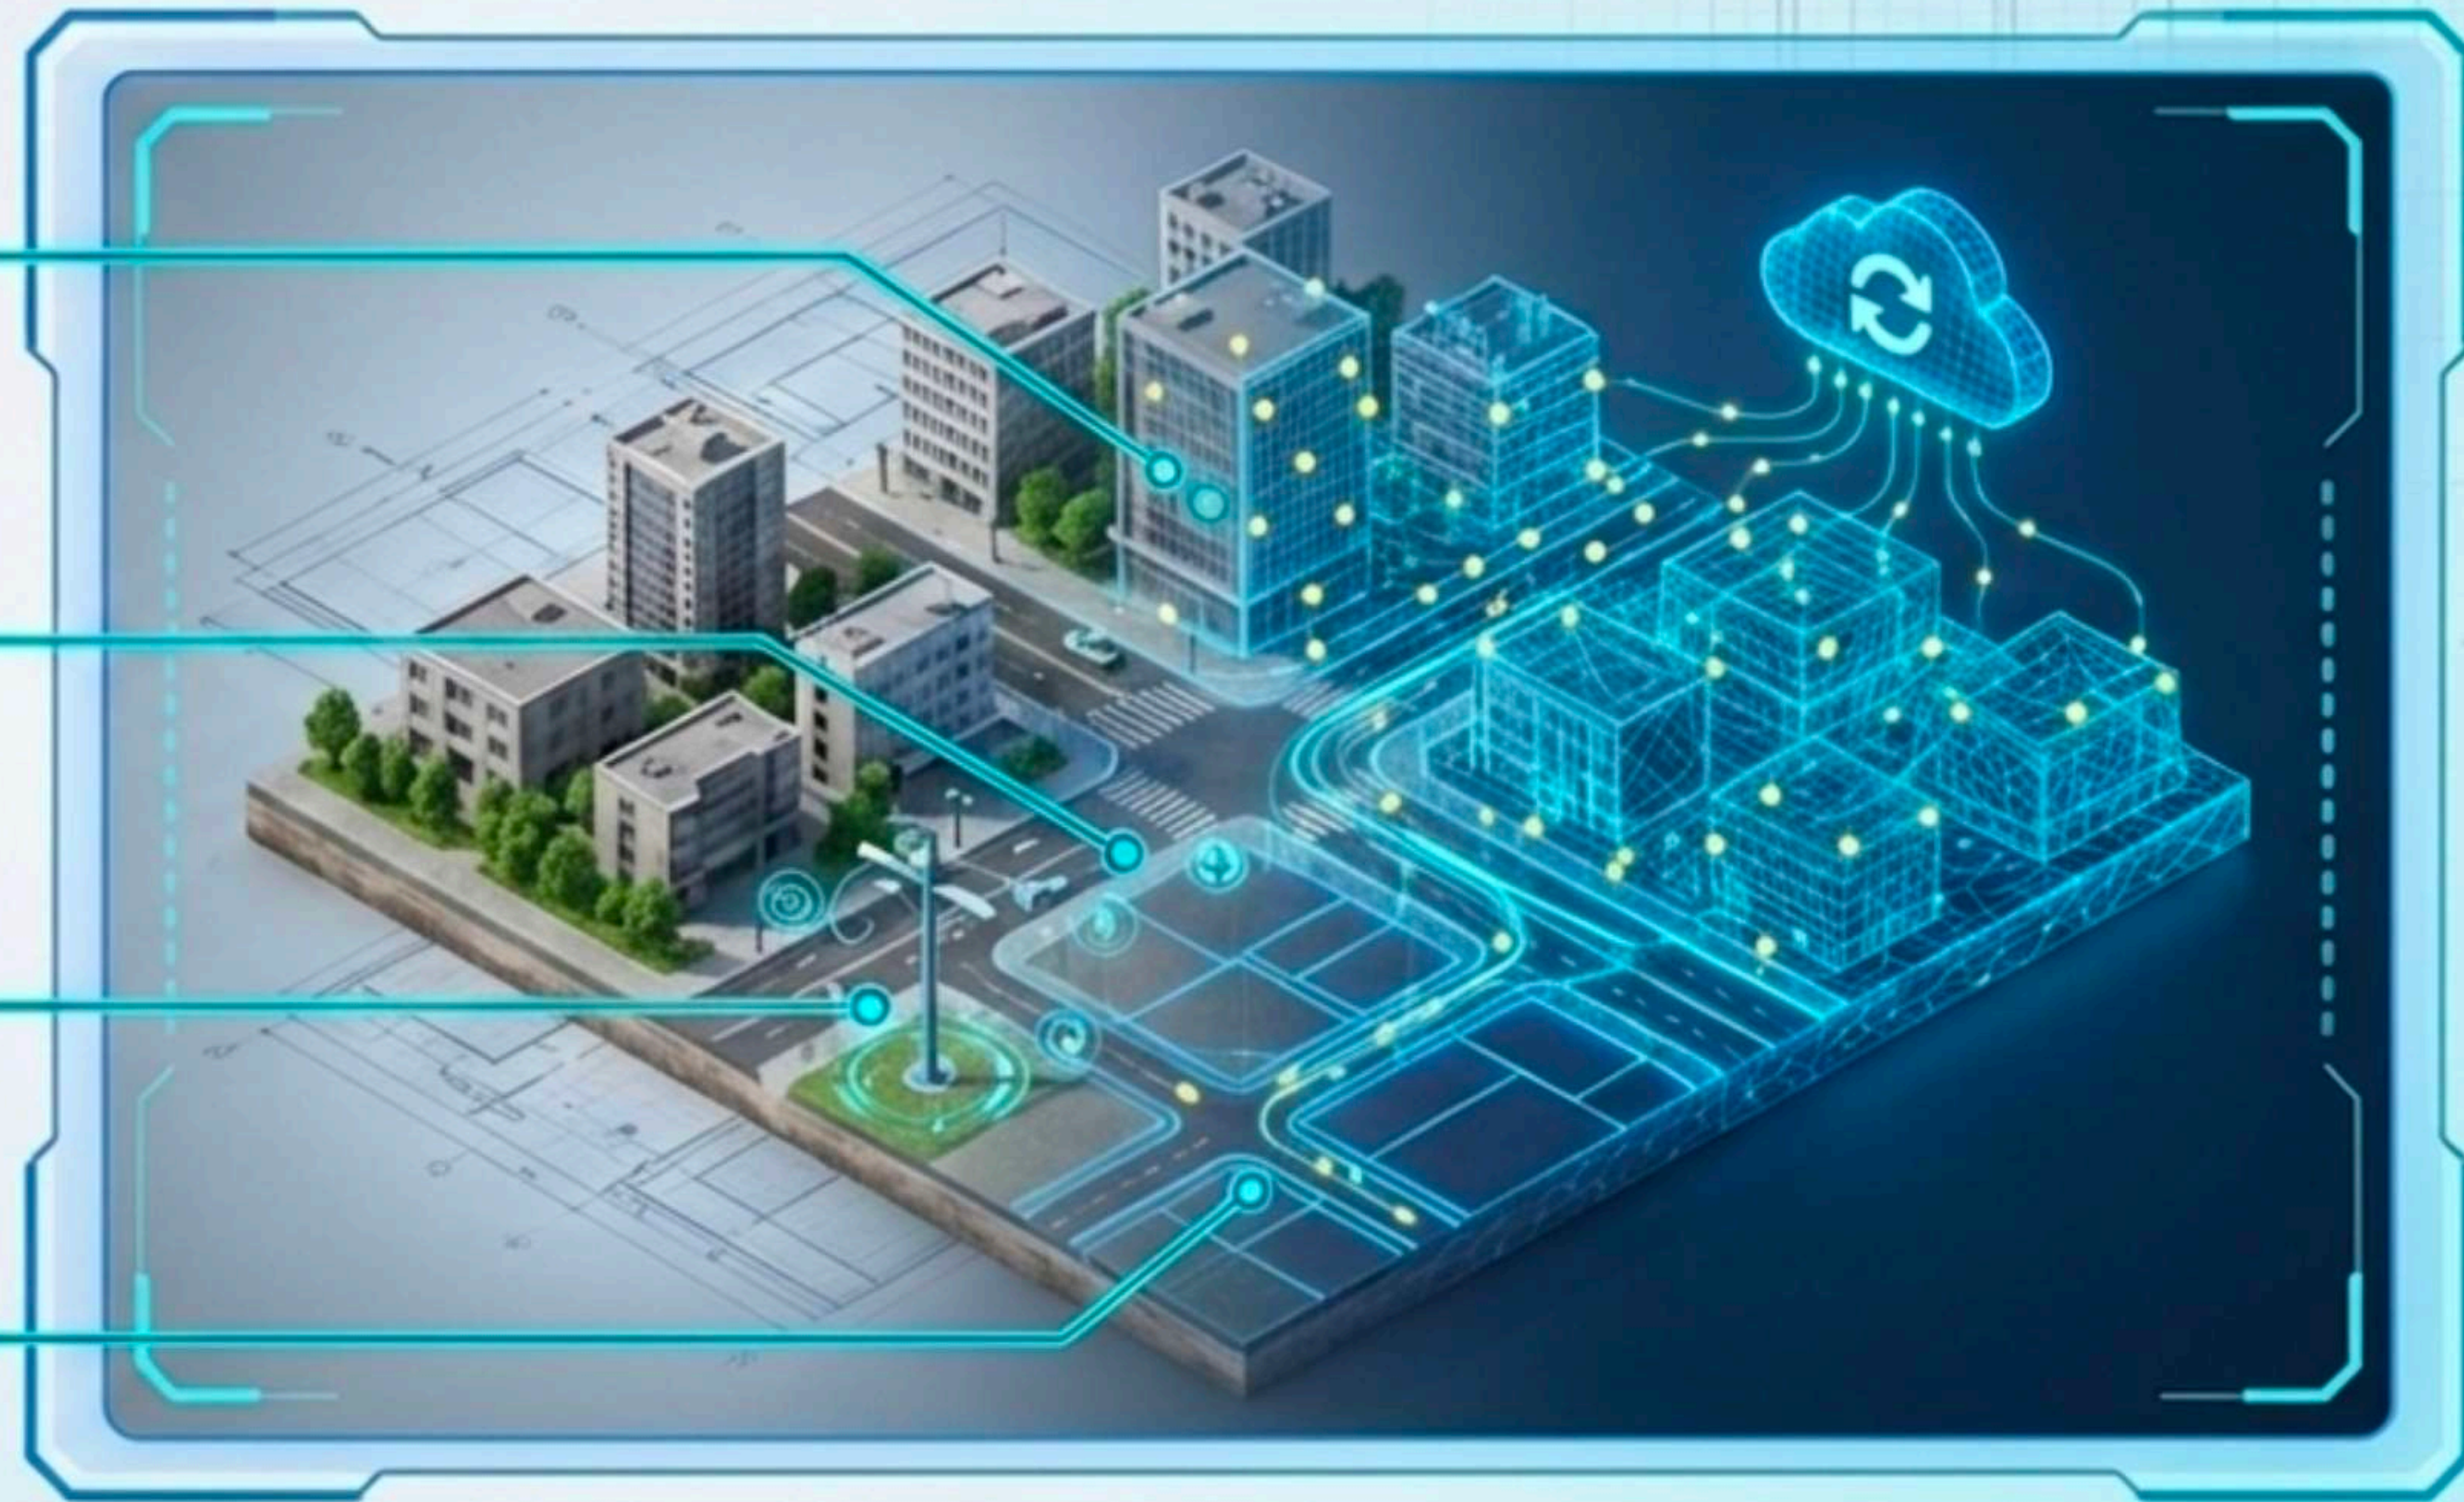

The platform generates a digital twin of the city using drone and sensor data.

3D urban environment modeling

Digital mapping and geodata integration

Infrastructure and IoT object storage

Real-time visualization

A unified digital foundation for real-time city management

Unmanned Urban Monitoring

**DRONE
SERVICE**

**UNB
GROUP**

Automated takeoff
and landing
(drone stations)

Centralized fleet
management

Scheduled recurring
flights and
repeatable routes

Automated
return-to-base

24/7 operation without
human intervention

AI Control: Violation Detection

DRONE
SERVICE

UNB
GROUP

The system automatically detects a wide spectrum of events in the urban environment.

📍 [!] Illegal construction

📍 [!] Waste and pollution

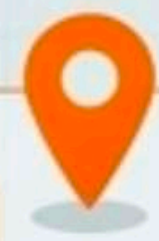

📍 [!] Traffic violations

📍 [!] Crowd gatherings and incidents

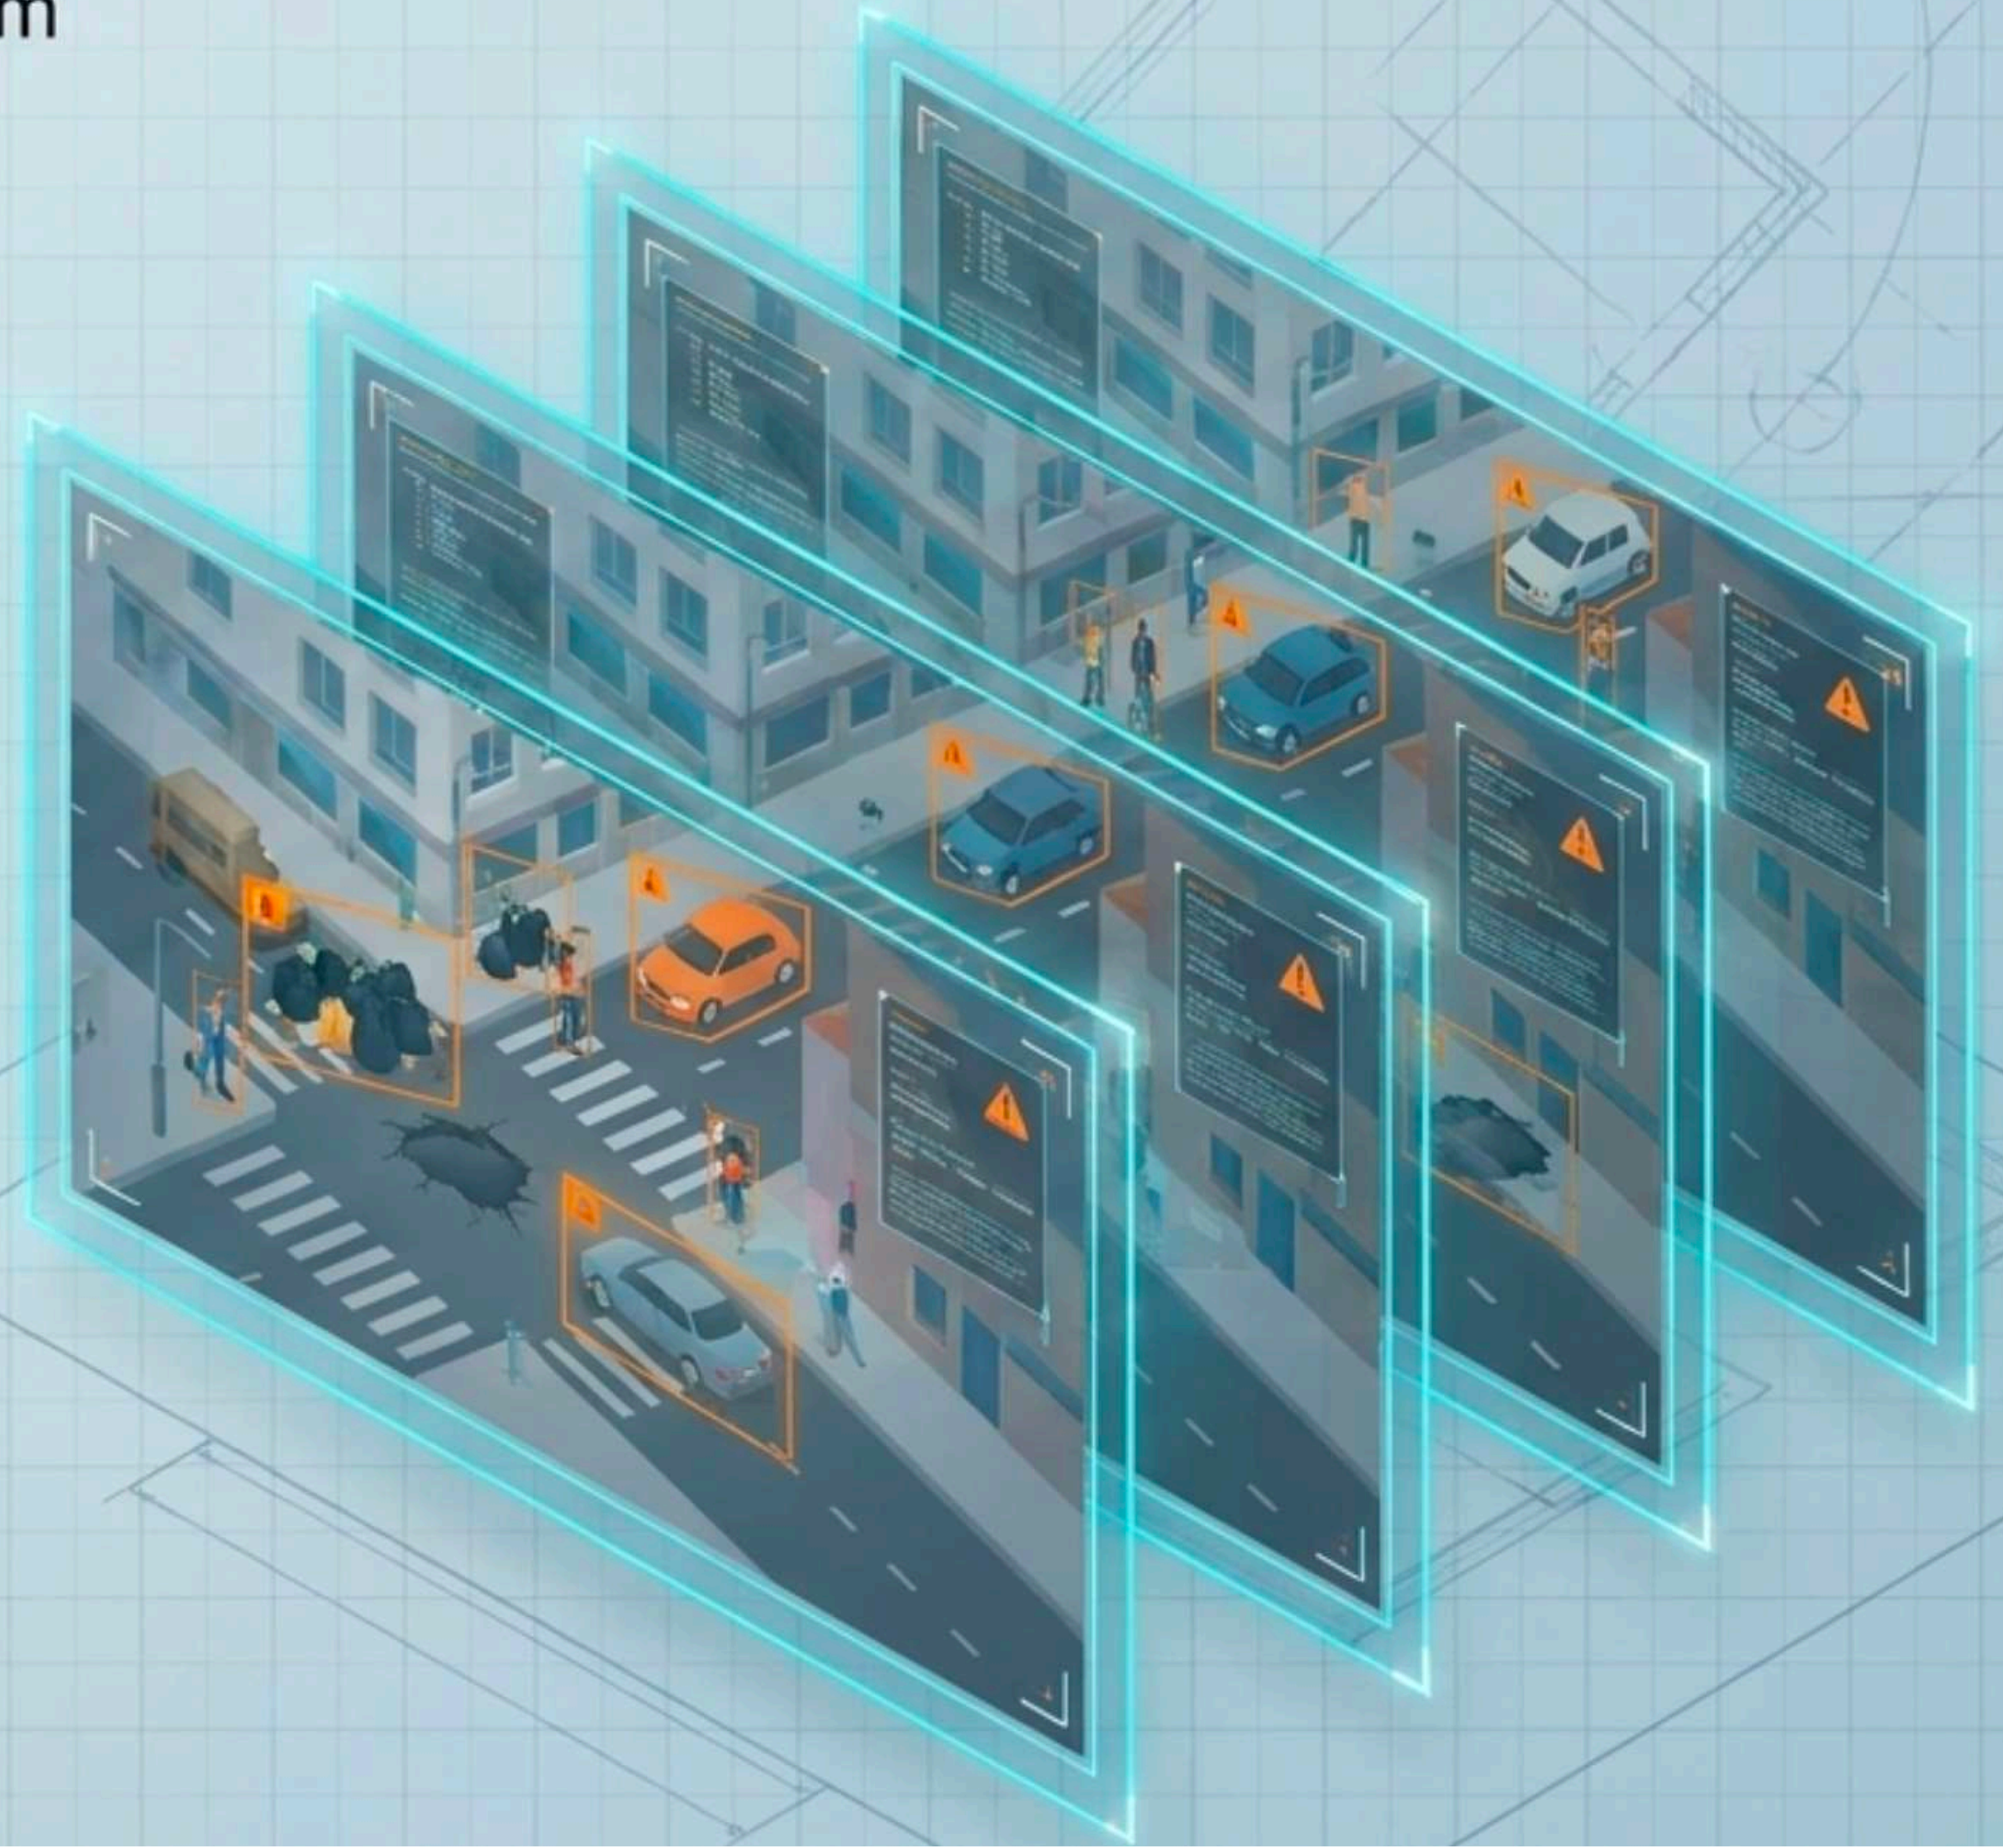

📍 [!] Infrastructure damage

📍 [!] Fires and emergencies

📍 [!] Environmental violations

The system automatically tracks and flags these events directly within the dashboard.

UNB
GROUP

Intelligent Decision-Making System

The AI platform analyzes real-time data to assist in macro-level city management.

Object recognition
and vehicle tracking

Behavioral analysis
and anomaly
detection

Predictive risk
forecasting

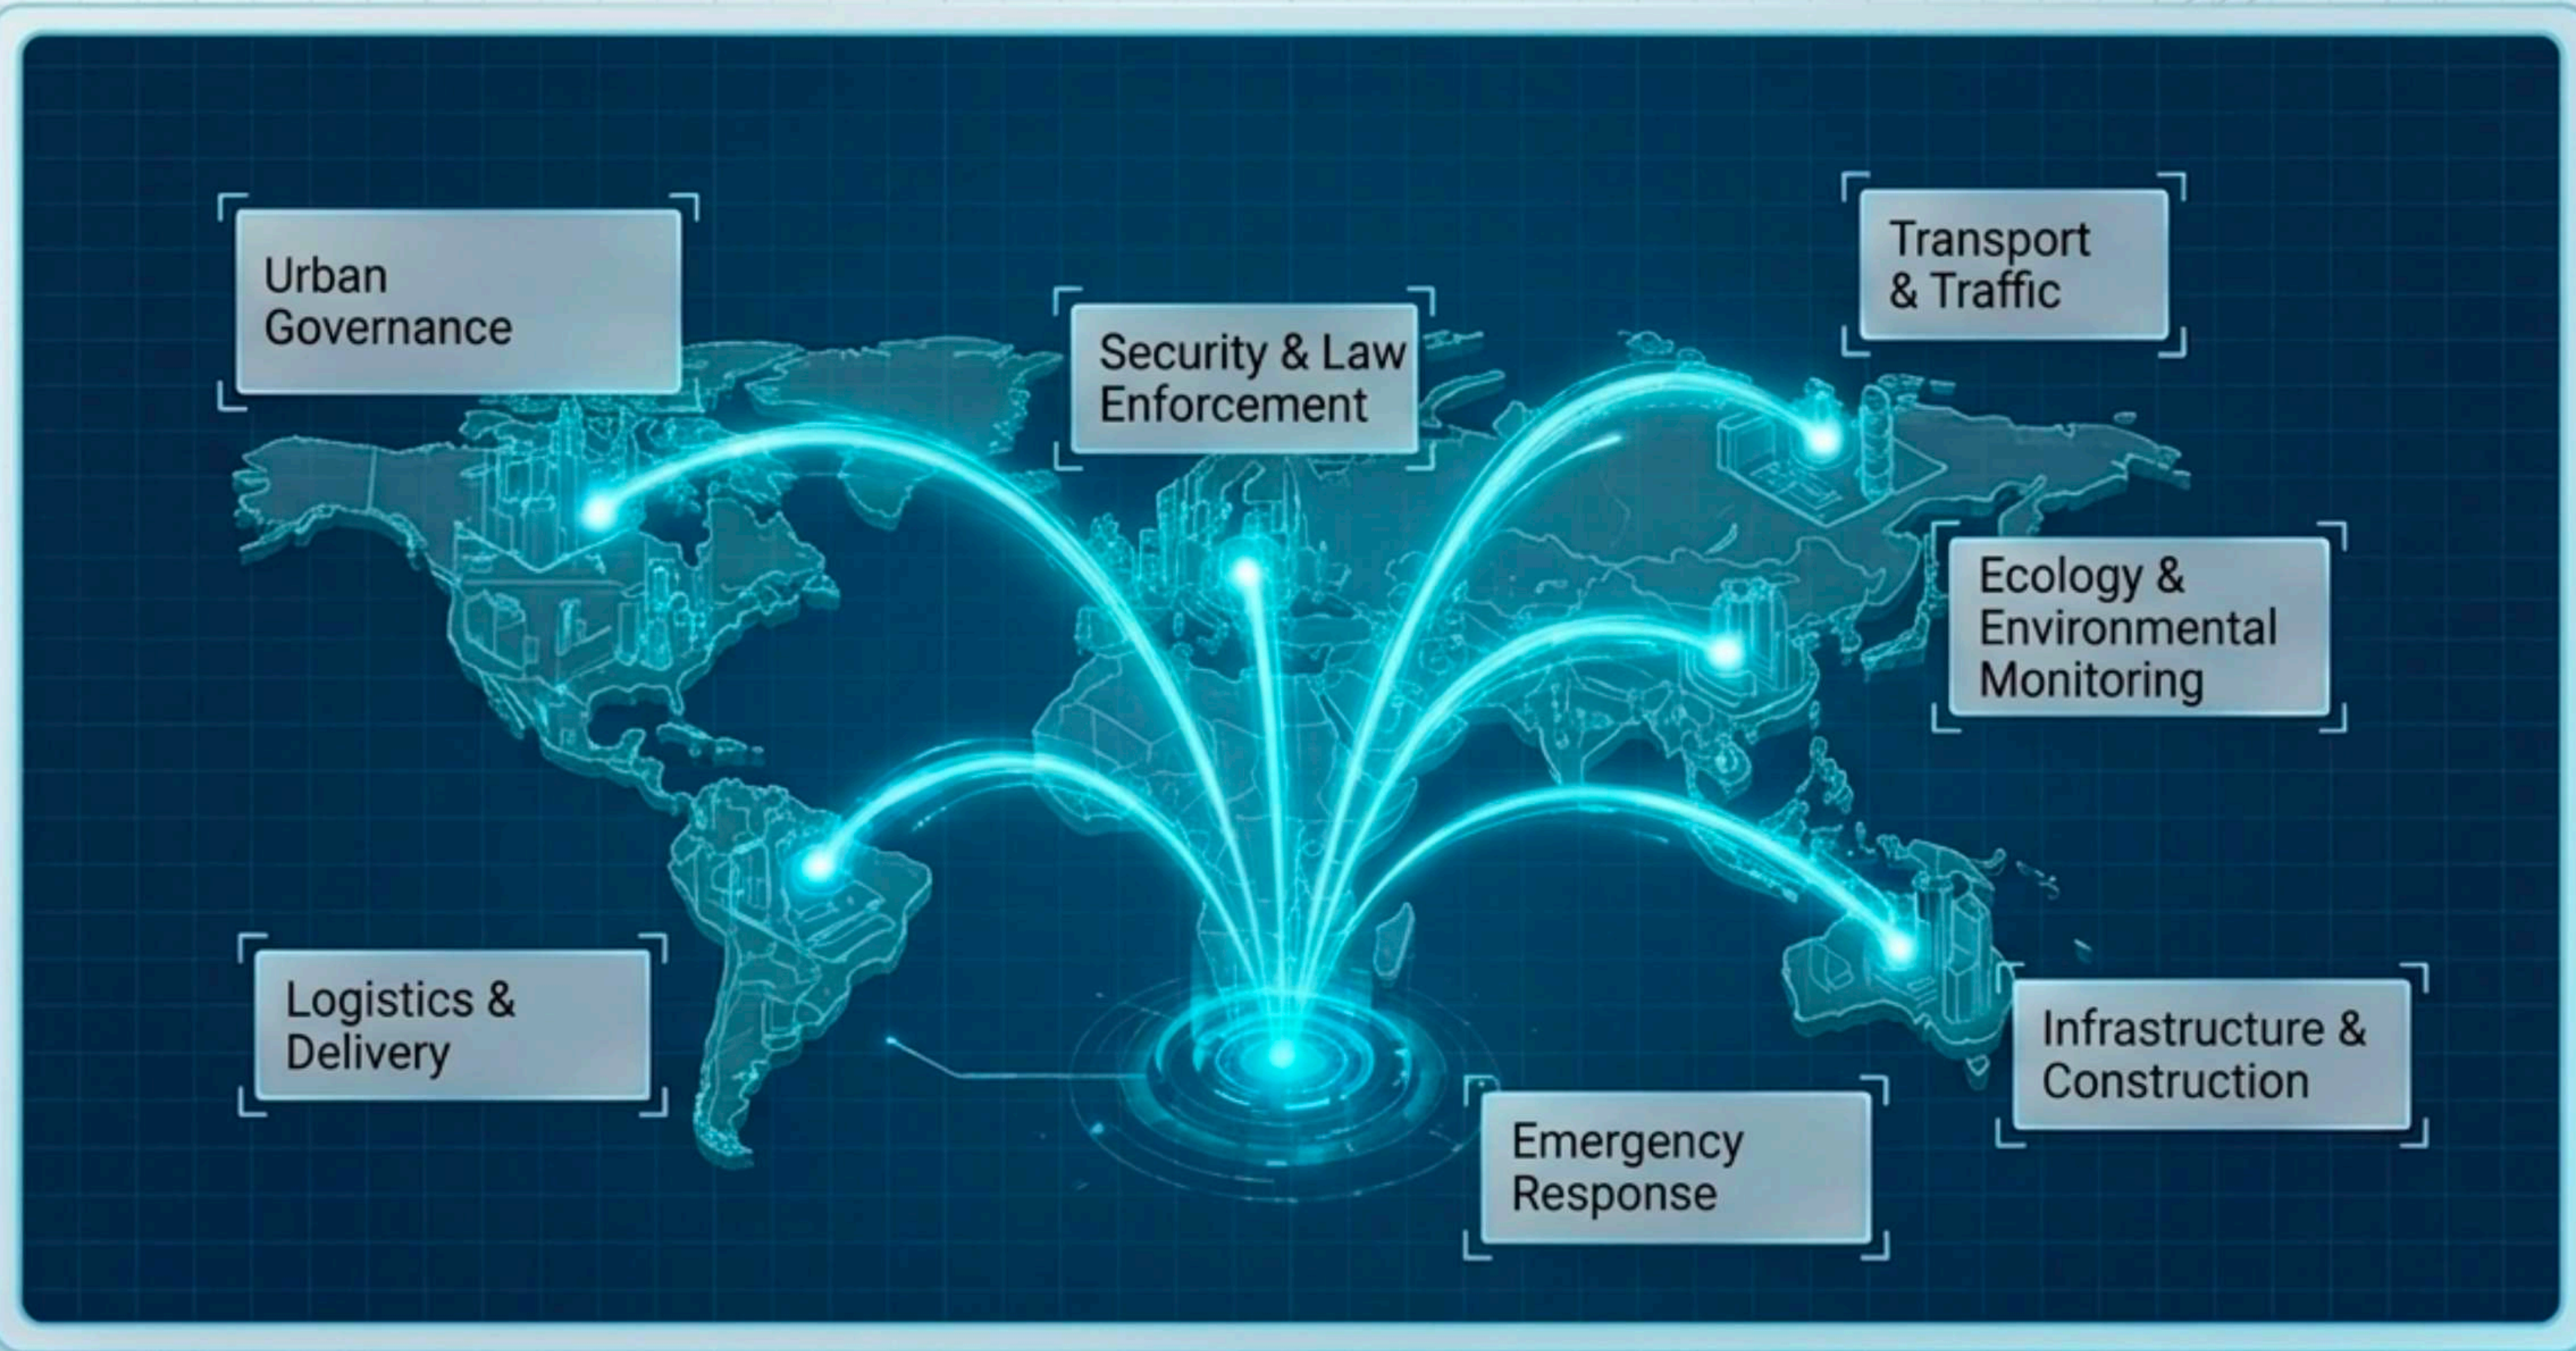

Automated report
generation

Core Smart City Use Cases

**DRONE
SERVICE**

**UNB
GROUP**

City-wide scalability across all municipal services

Implementation Impact: Business Outcomes

Traditional Methods	Smart Platform
Manual & slow incident detection	 Accelerated AI detection
High personnel workload & risks	 Reduced routine tasks & enhanced safety
Reliance on the human factor	 Increased monitoring precision
High operational costs	 Decreased monitoring expenses

Transition to predictive,
data-driven management
